INTRODUCTION

As someone who developed Sz won my 30th birthday, I recall having a fever prior to the psychosis. The immune system is affected by gut microbes or gut bacteria. When then gut bacteria is out of homeostasis, the immune system is weakened. Sz is caused by the HSV-1 virus. Husband and wife share gut bacteria and HSV-1 leading to Alzheimer Disease.

I have been taking a probiotic for digestion. I noticed a persistent fungus on my leg shrunk when I was taking the probiotic. That's because my immune system is strengthened.

In a previous paper, I suggested that a liver enzyme, catalase, plays a role in mental disorders including Sz, Alz, Parkinsons, cancer and depression. Catalyst breaks down hydrogen peroxide. If H₂O₂ is not broken down, cancer results.

We need a cure for HSV-1 and aligning out gut bacteria. An acquaintance from High School (Luigi Rocca) poisoned me a friend with his stool during a dinner party at university. And the person whom I was best man at his wedding (Tim Hunt) purposely gave me the HSV-1 virus over a game of cards. So that's why I ended up with SZ and probably Alz in the years to come.
